1 Some Random Notes

<hr> is used to create a horizontal rule.

To create a link for an email, use the mailto protocol like this: Send Email. When clicked, this will open the user's default email client with a new message addressed to example@example.com.

Similarly, for a **phone number**, use the tel protocol: Call Us. Clicking this link on a device that supports phone calls will start a call to the number +1234567890.

In to start numbering with 100 use .

In tables we use border-collapse to collapse the borders of the table cells. This property is used to merge the borders of the table cells.
